CCTNS Complaints API

Haryana Police — PHQ Complaint Dashboard

API Integration Documentation for AI/Developer Use

---

1. Overview

This document describes the Web APIs provided by the Haryana Police CCTNS (Crime and Criminal Tracking Network & Systems) system for fetching complaint and master data. These APIs are used by the PHQ Complaint Dashboard to retrieve and display complaint records from police stations across Haryana.

Base API Host: api.haryanapolice.gov.in

---

2. Authentication Flow

All complaint data APIs require a Bearer token. The flow is:

1. Obtain a SecretKey (shared privately by the system administrator).
2. Call the Token Generation API with the SecretKey to receive a Bearer token.
3. Include the token in the Authorization header for all subsequent API calls.
4. Decrypt the response data using the separately provided Decrypt Key.

---

3. Generate Token API

This must be called before any complaint data API. It returns a Bearer token used for authorization.

Field	Value
Method	`GET`
URL	`http://api.haryanapolice.gov.in/cmDashboard/api/HomeDashboard/ReqToken`
Auth Required	No

Query Parameters

Parameter	Type	Required	Description
`SecretKey`	String	Yes	A secret key shared separately by the administrator

Sample Request

```
GET
http://api.haryanapolice.gov.in/cmDashboard/api/HomeDashboard/ReqToken?Sec
retKey=YOUR_SECRET_KEY
```

Response

Returns a Bearer token string to be used in subsequent API calls.

> ⚠ **Note:** The SecretKey is confidential and must not be hardcoded in client-side code. The token may expire; refresh it by calling this endpoint again.

---

4. Complaint Data API

Returns complaint records filtered by a date/time range. Response data is encrypted.

Field	Value
Method	`GET`
URL	`http://164.100.137.228/homedashboard/api/HomeDashboard/ComplaintData`
Auth Required	Yes — Bearer Token in Authorization header
Response	Encrypted JSON (decrypt using Decrypt Key)

Query Parameters

Parameter	Type	Required	Description
TimeFrom	String	Yes	Start date/time. Format: MM/DD/YYYY
TimeTo	String	Yes	End date/time. Format: MM/DD/YYYY

Headers

```
Authorization: Bearer YOUR_TOKEN
```

Sample Request

```
GET
http://164.100.137.228/homedashboard/api/HomeDashboard/ComplaintData?TimeFrom=10/01/2022&TimeTo=10/01/2022
Authorization: Bearer YOUR_TOKEN
```

---

5. Complaint Enquiry Data API

Returns enquiry-related complaint records for a given date/time range. Structurally identical to the Complaint Data API.

Field	Value
Method	`GET`
URL	http://api.haryanapolice.gov.in/cmdashboard/api/HomeDashboard/ComplaintEnquiryD
Auth Required	Yes — Bearer Token in Authorization header
Response	Encrypted JSON (decrypt using Decrypt Key)

Query Parameters

Parameter	Type	Required	Description
TimeFrom	String	Yes	Start date/time. Format: MM/DD/YYYY
TimeTo	String	Yes	End date/time. Format: MM/DD/YYYY

Headers

```
Authorization: Bearer YOUR_TOKEN
```

Sample Request

```
GET
http://api.haryanapolice.gov.in/cmdashboard/api/HomeDashboard/ComplaintEnquiryData?TimeFrom=10/01/2022&TimeTo=10/01/2022
Authorization: Bearer YOUR_TOKEN
```

---

6. Master Data APIs (Reference/Lookup)

These APIs provide reference data for districts, police stations, and offices. They appear to be publicly accessible (no authentication required).

6.1 District Master

URL	`https://api.haryanapolice.gov.in/eSaralServices/api/common/district`
Sample (by ID)	`https://api.haryanapolice.gov.in/eSaralServices/api/common/district/13`

6.2 Police Station Master (by District)

URL	`https://api.haryanapolice.gov.in/eSaralServices/api/common/GetPSByDistrict`
Parameters	`state (e.g. 13), District (e.g. 13238)`
Sample	`https://api.haryanapolice.gov.in/eSaralServices/api/common/GetPSByDistrict?sta`

6.3 Office Master

URL	`https://api.haryanapolice.gov.in/eSaralServices/api/common/GetAllOffices`

---

7. Full Integration Flow (Step-by-Step)

1. Receive SecretKey from system administrator (out-of-band, confidential).
2. Call the Token API: GET /ReqToken?SecretKey=... — save the returned token.
3. Call /ComplaintData or /ComplaintEnquiryData with your desired date range and the Bearer token in the Authorization header.
4. Receive encrypted response — decrypt it using the Decrypt Key (provided separately).
5. Use Master Data APIs to resolve district/police station IDs to human-readable names if needed.

---

8. Important Notes for AI / Developers

- SecretKey and Decrypt Key are NOT in this document — they are shared privately by the administrator.
- The Complaint Data URL uses a direct IP (164.100.137.228) instead of the hostname — use it as-is.

- Date format for TimeFrom/TimeTo is MM/DD/YYYY (e.g., 10/01/2022 = October 1, 2022).
- All complaint response data is encrypted — do not attempt to parse raw response without decrypting first.
- These APIs serve the PHQ Complaint Dashboard for Haryana Police and are internal government systems.
- Source: Email thread between DGP SV & ACB, SCRB Haryana, and HPE team dated March-April 2026.
